

Live View for Quarry and Mining Operations — Checklist

backwatch.co.uk

Implementation Checklist

- ☐ Identify which vehicles were operating in the incident area at the relevant time — GPS track data from the live view platform provides this within seconds
- ☐ Access the camera feeds from those vehicles for the relevant time window — clip retrieval from cloud storage takes seconds rather than the minutes or hours required to retrieve a physical MDVR
- ☐ Preserve the relevant footage — flagging clips for retention outside the standard rolling deletion cycle
- ☐ Provide footage to the HSE inspector, RIDDOR investigation, or legal representative as required — cloud-based systems allow authorised third-party access without physical media transfer
