

Reducing Blind Spots in Industrial Machinery — Checklist

backwatch.co.uk

Implementation Checklist

- ☐ Rear camera: Standard reversing coverage — mandatory and typically fitted as standard equipment on modern machines.
- ☐ Front-under camera: Low-mounted forward-facing camera showing the area beneath the forks and immediately ahead of the front axle at ground level. This is the zone where a person crouching at the load face is invisible from the operator's position.
- ☐ Load camera: A camera positioned on the boom looking toward the load — allows the operator to monitor load stability and the immediate zone around the load without exiting the cab.
